

Ayvens
Spain Mobility Solutions S.A.U

Majadahonda, 9th June 2026.

Dear Mr./Ms **Sourabh TAPASE**

By means of this document, we inform you that Ayvens Spain Mobility Solutions S.A.U. will proceed to install the **DeepNet MobileID** application on your personal mobile phone. The sole purpose and functionality of this application is to generate a temporary password, or Token, which enables access to the Ayvens Spain VPN.

The use of a Token to remotely connect to the company via VPN is required for security reasons. For the same reason, the application used to obtain the Token must be installed on a device different from the PC used to connect to the company's servers.

This application has no other use or functionality. It does not access contacts, images, or location data; it does not grant the company access to your personal mobile device or the information stored on it; it cannot make any modifications to the device, nor can it take control of it.

With the installation of this application, managed by Ayvens Spain Mobility Solutions S.A.U., the infrastructure department will only have access to the App itself in order to, if necessary, block access to the DeepNet MobileID application.

Likewise, for security reasons and in order to keep the application protected, the device must have a lock screen password.

In the event the device is lost, the Ayvens Spain infrastructure department must be notified as urgently as possible.

I give my consent for these actions to be carried out.

Sourabh Dilip Tapase
